

Please develop a simple queue management application (Full stack), with the following functions.

1. Queue Manager can login and create Queues.
2. Each Queue has a Name.
3. The Manager can add new persons / tokens into the queue. [ once added a token is created ]
4. The queue displays the list of people / tokens waiting in the queue.
5. The manager can move tokens up and down in the queue.
6. The manager can assign the token at the top of the queue for service. [With a simple button click ]
7. The manager shall be able cancel a token from the queue.
8. There shall be a dashboard which shows analytics on wait times, queue length trends etc.

Evaluation:

1. Working application
2. Code in Github
3. Good UI will get additional score.
4. Bug free application will get additional score.

If your project is shortlisted, you will be asked to explain the technical details of the project in the interview.

Thanks,  
Rugas Team.

Assignment deadline: 25th August, 2025
